

3-D Laserscanning Anti-Glare Spray and Cleaner

To obtain satisfactory test results surfaces of objects must be prepared with anti-reflective coatings before scanning by the 3-D laser scanning technique.

HELLING 3-D Laser Scanning Spray is very fine-grained. Therefore, it creates a thin white and homogeneous anti-reflection coating on the surface of the object.

The surface to be scanned can be prepared optimally with the **HELLING 3-D Laser Scanning Cleaner**.

Without corroding impact.

3-D Anti-Glare Spray

Art. No.: 119.990.001
 400 ml aerosol
 VPE: 12 aerosols / box
 Art. No.: 119.900.005
 1 L can

3-D Cleaner

Art. No.: 119.990.002
 400 ml aerosols / box
 VPE: 12 aerosols / box

Application:

- Clean surface of object to be scanned with 3-D Laser Scanning Cleaner before measuring
- Shake Anti-Glare Spray well before using
- Spray Anti-Glare Spray thinly on the surface from approx. 20 cm distance
- After scanning the Anti-Glare Spray can be removed easily with the 3-D Cleaner

OPTIONAL

Spray head extension

Art. No.: 119.990.018
 White spray head extension
 with pipe 100 mm
 for 3D atnti-glare spray 400 ml
